PBImgAnalysis

P. Baillehache

May 1, 2019

Contents

Introduction

PBImgAnalysis is a C library providing structures and functions to perform various data analysis on images.

It implements the following algorithms:

- K-means clustering on the RGBA space of pixels in a user defined radius
- Intersection over Union (aka Jaccard index)

- ImgSegmentor, a multiclass multimodal image segmentation algorithm based on heuristics and NeuraNet

It uses the `PBErr`, `PBDataAnalaysis`, `GenBrush`, `GDataSet`, `GenAlg`, `NeuraNet`, `ResPublish` libraries.

1 Interface

```
// ============ PBIMGANALYSIS.H ================

#ifndef PBIMGANALYSIS_H
