## Introduction

 ${\it PBImgAnalysis}$  is a C library providing structures and functions to perform various data analysis on images.

It implements the following algorithms:

- K-means clustering on the RGBA space of pixels in a user defined radius
- Intersection over Union (aka Jaccard index)

• ImgSegmentor, a multiclass multimodal image segmentation algorithm based on heuristics and NeuraNet

It uses the PBErr, PBDataAnalaysis, GenBrush, GDataSet, GenAlg, NeuraNet, ResPublish libraries.

### 1 Interface

```
// ====== PBIMGANALYSIS.H ========
#ifndef PBIMGANALYSIS_H
